

Event Report

Report #68 - generated 2026-07-18T00:46:54.511515517

Executive summary

Events	Interactions	Schools	Registrations
34	33	90	1030

Executive brief: aggregated charts, key findings, and dataset coverage. Raw records stay in VNMap. The selected filters matched 231 records across 5 data sections.

Key findings

- 1. Registration status: Highest value: PENDING (301).
- 2. Interaction trend: Highest value: 2026-07-02 (33).
- 3. Interactions by channel: Highest value: VISIT (30).
- 4. Event status: Highest value: UPCOMING (24).

Report design

The main PDF is intentionally concise for review and decision-making. Use VNMap filters or a dedicated data export when row-level investigation is required.

Performance overview

FIGURE 1

Registration status

Selected registrations grouped by status.
Unit: count | Period: All available dates to today | Source: Registration records

Insight: Highest value: PENDING (301).

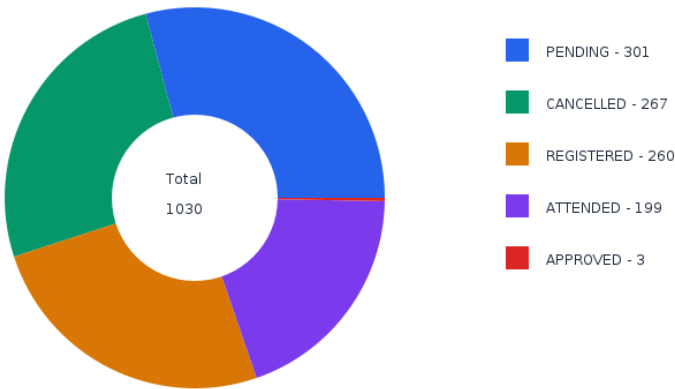

FIGURE 2

Interaction trend

Daily interaction volume in the selected reporting period.
Unit: count | Period: All available dates to today | Source: Interaction records

Insight: Highest value: 2026-07-02 (33).

Performance overview

FIGURE 3

Interactions by channel

Selected interactions grouped by channel.
Unit: count | Period: All available dates to today | Source: Interaction records

Insight: Highest value: VISIT (30).

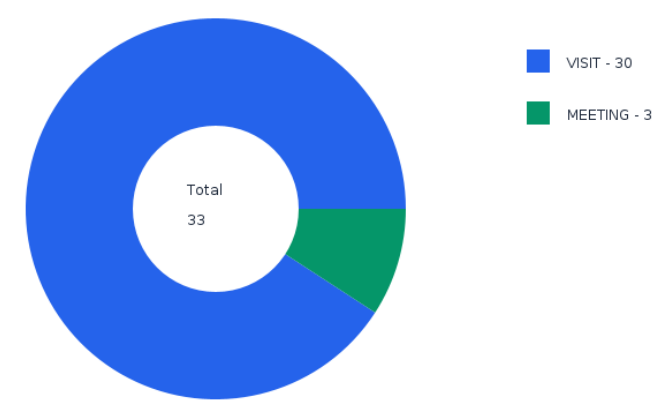

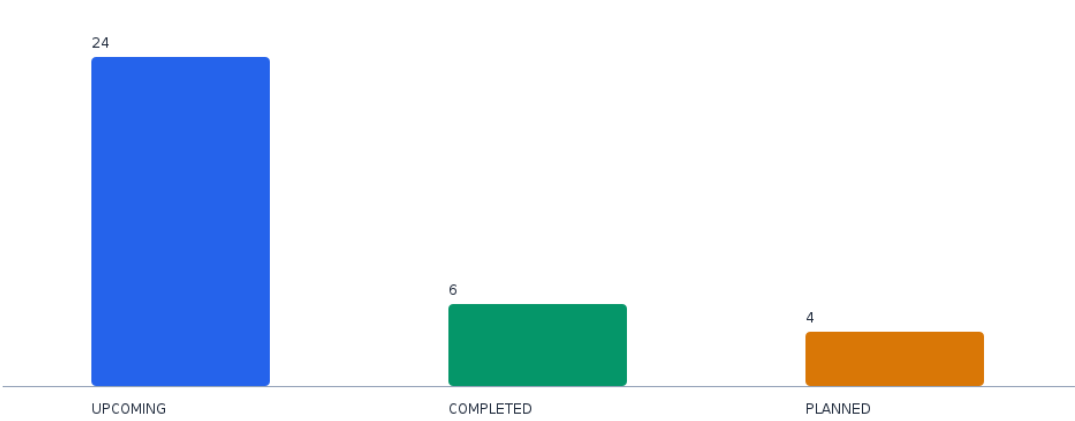

FIGURE 4

Event status

Selected events grouped by operational status.
Unit: count | Period: All available dates to today | Source: Event summary

Insight: Highest value: UPCOMING (24).

Data coverage

Counts reflect all records matching the selected filters. The executive PDF keeps detail data in the system to avoid duplicating long operational tables.

Data section	Matched	PDF treatment
Summary	34	Aggregated into KPIs, findings, or charts
Schools	90	Aggregated into KPIs, findings, or charts
Assignments	72	Aggregated into KPIs, findings, or charts
Interactions	33	Aggregated into KPIs, findings, or charts
Analytics	2	Aggregated into KPIs, findings, or charts

Need every row? Apply narrower filters in VNMap or use a dedicated CSV/data export. A decision report should not duplicate the operational database.
